

ONE MORE TOOL FOR YOUR HEALTH!

Why does a builder invest in a nail gun instead of using a hammer?
The job gets done more efficiently and in the long run saves money.

Why invest in a commercial Alkaline Water Machine?

Alkaline water's smaller water clusters helps enhance hydration on a cellular level, which helps with numerous health issues such as:

***Arthritis *Diabetes *Cancer *Fibromyalgia *Weight loss
*Neuropathy *Insomnia *Stress *Fatigue**

And in the long run can save hundreds/thousands of \$\$\$ in health costs.

Distilled and reverse osmosis take out all the minerals and have regular sized water molecules like tap and Brita water. Ionized alkaline water machines split tap water into two kinds of water through an **electrolysis function**. 1) **Alkaline water** has ***smaller*** water clusters to carry the healthful alkaline minerals and powerful antioxidants to the cellular level. 2) **Acidic water** can be used as an antibacterial cleaner for kitchens, bathrooms, to rid heavy pesticide residues from non-organic fruits and vegetables, watering plants and vegetables and to help your skin and hair feel softer from the antibacterial properties.

It is no small feat to accomplish what these machines do and the benefits are worth it! The expense of the machine (most cost from \$2,500-\$4,000 due to multi-level mark-ups) is due to the proven technology to split water into alkaline and acidic water using expensive titanium plates plus a silver nano filter to purify the best ever tasting water. Over the lifetime of your machine, your expense amounts to about 5 cents a quart to make!

Best investment for optimum health!

The smaller alkaline water clusters don't last. Nature takes place and they merge with other water molecules to become regular size molecules so alkaline water should to be consumed within 24 - 48 hours after making it, ***hence, you need to own a machine and why you don't see bottled "ionized" alkaline water for sale in the stores.*** The store alkaline water products add alkaline minerals, such as calcium, to **CALL** it alkaline!

About 70% of your body is water! Think about the difference to your health with alkaline water! Most American diets cause the body to be acidic, and who wants or ***really who will*** dramatically alter their diets? ***It's easy to change your water!*** Research has shown that **most disease only form and thrive in an overly acidic condition.** Drinking alkaline water is like turning on a fire hose to distinguish the acid in your body, it gets to the cellular level! It's easy, tastes great and is better for the environment and you than buying bottled water.

Make your own and enjoy the benefits every day!

Testimony: After 2 months, I've lost weight, my glucose numbers are now in the 80s instead of the 300s and I feel great!

LOVE THE WATER YOU DRINK!
