

# STARPACKS

Nova's formula leads the nutritional field, utilizing the highest quality raw materials, formulations based on the most current scientific knowledge, advanced production technology and diligent quality control. The Starpacks deliver a complete nutrient profile, carefully balanced with respect to human requirements, in a highly utilizable, absorbable form with herbal support for the whole body at the most affordable price!

## Highlights of the Starpacks:

- **Sustained Release Nutrition.** Advanced capsule technology allows a gradual release of the water soluble B and C vitamins all day which promotes optimum tissue saturation and minimal waste.
- **Beta-Carotene.** The plant source of Vitamin A, which does not accumulate toxic levels in the liver, has been shown to have anti-carcinogenic properties and one of several important dietary factors in the prevention of cancer. Beta-carotene is also a powerful antioxidant (see below).
- **Complete Antioxidant Support with Astaxanthin:** Optimum amounts to help rid your body of built up pesticides and toxins and to help fight off the aging process by removing free radicals. Free radicals damage cells randomly much like the sparks flying out of a fireplace burn holes in your carpet. **Astaxanthin** is a powerful antioxidant to help combat the effects of cell phone radiation.
- **Mineral Chelates.** Many mineral forms exist in the market but none better than those in the Starpacks due to a patented chelation process using hydrolyzed vegetable proteins as their carrier to ensure proper absorption, especially those that compete with each other for uptake. Nova's mineral profile contains virtually every trace element known to be essential in human nutrition. You won't find Calcium Carbonate, the least bio-available and cheapest form, Nova spends extra for *chelated* Calcium - you cannot absorb any more Calcium than what is in the formula, it's a lot!
- **Natural Source Vitamin E.** Researchers have found that natural vitamin E (d-alpha) assimilates far better than synthetic versions (dl-alpha). Nova's pure d-alpha tocopherol is the most biologically active form. Vitamin E is vital for the protection of our cell membranes as well as keeping your skin, heart, circulation, nerves, muscles and red blood cells healthy and it has antioxidant support.
- **Complete B-complex.** Contains generous, balanced quantities of ALL the essential B vitamins including inositol, choline and para-amino benzoic acid (PABA) to provide more benefits than other formulas that contain only a few unbalanced B vitamins. Vitamin B-3 is provided as a balance to obtain the nutrient's cardiovascular benefits without producing a "niacin flush".
- **Mineral Ascorbate Vitamin C.** Calcium and magnesium ascorbates are gentle, pH-buffered and easily tolerated in the gastrointestinal tract and have the additional benefit of replenishing minerals lost through vitamin C's slight diuretic effect. Ascorbates have healthful alkalizing benefits unlike ascorbic acid, the cheaper form so no nausea & diarrhea side effects, try the ascorbate difference!
- **Herbs, Nucleic Acids, Enzymes & Super Foods.** Herbal care to support specific organs, tissues and digestion. Nucleic acids, RNA and DNA, supply nucleotides used as building blocks for the body's own nucleic acids and as cofactors in every energy-producing reaction in the body.
- Nova's STARPACKS have amazing synergistic benefits & the packets make them so easy to take!

***Testimonies: I've lost 10 pounds in 3 months!***

***I've noticed more energy during the day and I'm sleeping better at night!***

***My acid reflux went away in the first week!***

***My blood work numbers were better in just one month!***
